ESDAXLC6-1BT2Y

Features

- AEC-Q101 qualified
- Flow-through routing to keep signal integrity
- Ultra large bandwidth: 12 GHz
- Ultra low capacitance: 0.4 pF
- Extended operating junction temperature range: -55 °C to 150 °C
- RoHS compliant
- Complies with ISO 10605 - C = 150 pF, R = 330 Ω
  - ±16 kV (contact discharge)
  - ±30 kV (air discharge)
- Complies with ISO 10605 - C = 330 pF, R = 330 Ω
  - ±12 kV (contact discharge)
  - ±30 kV (air discharge)
- Complies with ISO 7637-3:
  - pulse 3a: V_S = -150 V
  - pulse 3b: V_S = +150 V
  - pulse 2a: V_S = ±85 V

Application

The ESDAXLC6-1BT2Y is designed to protect against electrostatic discharge on automotive circuits such as:

- APIX
- LVDS & digital video interface
- Ethernet and BroadrReach
- USB 2.0 and USB 3.0
- High speed communication buses
- RF front-end

Description

The ESDAXLC6-1BT2Y is an ESD device designed for high-speed lines protection.

1 Characteristics

Table 1. Absolute maximum ratings (T_{amb} = 25 °C)

Symbol	Parameter		Value	Unit
V_{PP}	Peak pulse voltage	ISO10605 / IEC 61000-4-2 (C = 150 pF, R = 330 Ω):		kV
		Contact discharge	16	
		Air discharge	30

2 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.

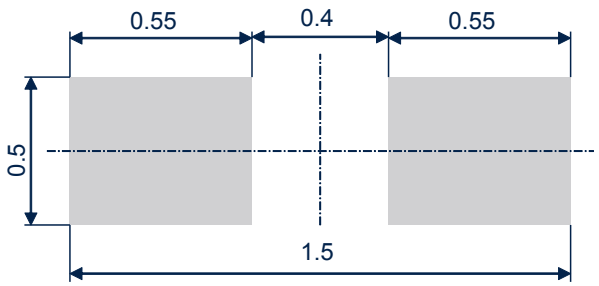
3 Assembly recommendations

3.1 Recommended footprint

Figure 26. Recommended footprint in mm

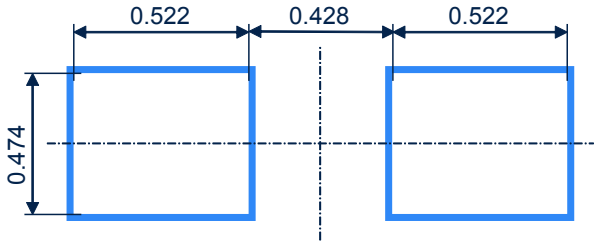


Note: Solder mask defined (SMD) recommended.

3.2 Stencil opening design

Stencil opening thickness: 75 µm / 3 mils

Figure 27. Stencil opening recommendations



3.3 Solder paste

1. Halide-free flux, qualification ROL0 according to ANSI/J-STD-004.
2. “No clean” solder paste recommended.
3. Tack force high enough to resist component displacement during PCB movement.
4. Particles size 20-38 µm per IPCJ STD-005.

3.4 Placement

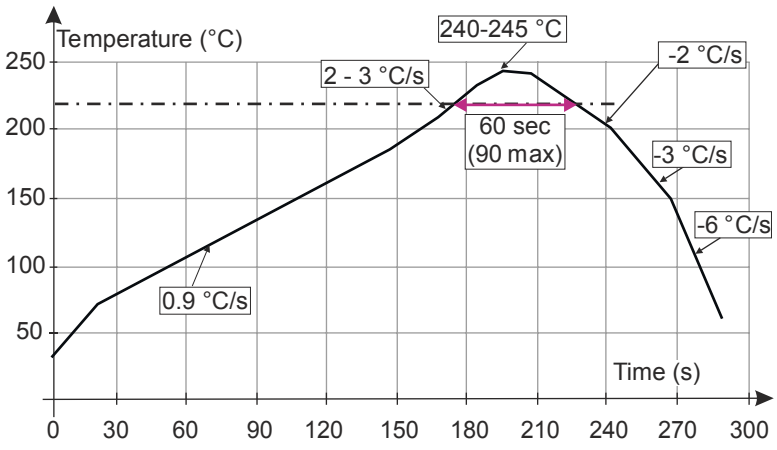
1. It is recommended to use leads recognition instead of package outline for accurate placement on footprint with adequate resolution tool.
2. Tolerance of ±50 µm (25% offset allowed on the smallest dimension of the smallest pad) is recommended.
3. 1.0 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
4. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

3.5 PCB design preference

1. Any via around or inside the footprint area must be closed to avoid solderpaste migration in the via.
2. Position and dimensions of the tracks should be well balanced. A symmetrical layout is recommended to prevent assembly troubles.

3.6 Reflow profile

Figure 28. ST ECOPACK recommended soldering reflow profile for PCB mounting



Note: Minimize air convection currents in the reflow oven to avoid component movement. O_2 rate inside the oven must be below 500 ppm. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.
